Model Code for Service Life Design fib Fédération internationale du béton,2006-01-01 fib Bulletin 34 addresses Service Life Design (SLD) for plain concrete, reinforced concrete and pre-stressed concrete structures, with a special focus on design provisions for managing the adverse effects of degradation. Its objective is to identify agreed durability related models and to prepare the framework for standardization of performance based design approaches. Four different options for SLD are given: - a full probabilistic approach, - a semi probabilistic approach (partial factor design), - deemed to satisfy rules, - avoidance of deterioration. The service life design approaches described in this document may be applied for the design of new structures, for updating the service life design if the structure exists and real material properties and/or the interaction of environment and structure can be measured (real concrete covers, carbonation depths), and for calculating residual service life. The bulletin is divided into five chapters: 1. General 2. Basis of design 3. Verification of Service Life Design 4. Execution and its quality management 5. Maintenance and condition control It also includes four informative annexes, which give background information and examples of procedures and deterioration models for the application in SLD. The format of Bulletin 34 follows the CEB-FIP tradition for Model Codes: the main provisions are given on the right-hand side of the page, and on the left-hand side, the comments. Note: An Italian translation of Bulletin 34 is also available; contact us for further details.

C Paul J. Deitel,Harvey M. Deitel,2016 For courses in computer programming C How to Program is a comprehensive introduction to programming in C. Like other texts of the Deitels' How to Program series, the book serves as a detailed beginner source of information for college students looking to embark on a career in coding, or instructors and software-development professionals seeking to learn how to program with C. The Eighth Edition continues the tradition of the signature Deitel Live Code approach--presenting concepts in the context of full-working programs rather than incomplete snips of code. This gives readers a chance to run each program as they study it and see how their learning applies to real world programming scenarios.

Durability Design of Concrete Structures A. Sarja,E. Vesikari,2004-03-01 Concrete structures can be designed for

durability by applying the principles and procedures of reliability theory combined with traditional structural design. This book is the first systematic attempt to introduce into structural design a general theory of structural reliability and existing calculation models for common degradation processes. It

Internationalizing the Curriculum Betty Leask,2015-03-27 The drive to internationalize higher education has seen the focus shift in recent years towards its defining element, the curriculum. As the point of connection between broader institutional strategies and the student experience, the curriculum plays a key role in the success or failure of the internationalization agenda. Yet despite much debate, the role and power of curriculum internationalization is often unappreciated. This has meant that critical questions, including what it means and how it can be achieved in different disciplines, have not been consistently or strategically addressed. This volume breaks new ground in connecting theory and practice in internationalizing the curriculum in different disciplinary and institutional contexts. An extensive literature review, case studies and action research projects provide valuable insights into the concept of internationalization of the curriculum. Best practice in curriculum design, teaching and learning in higher education are applied specifically to the process of internationalizing the curriculum. Examples from different disciplines and a range of practical resources and ideas are provided. Topics covered include: why internationalize the curriculum?; designing internationalized learning outcomes; using student diversity to internationalize the curriculum; blockers and enablers to internationalization of the curriculum; assessment in an internationalized curriculum; connecting internationalization of the curriculum with institutional goals and student learning. Internationalizing the Curriculum provides invaluable guidance to university managers, academic staff, professional development lecturers and support staff as well as students and scholars interested in advancing theory and practice in this important area.

Fiber-reinforced-plastic (FRP) Reinforcement for Concrete Structures Antonio Nanni,1993 The use of fiber reinforced plastic (FRP) composites for prestressed and non-prestressed concrete reinforcement has developed into a technology with serious and substantial claims for the advancement of construction materials and methods. Research and development is now occurring worldwide. The 20 papers in this volume make a further contribution in advancing knowledge and acceptance of FRP composites for concrete reinforcement. The articles are divided into three parts. Part I introduces FRP reinforcement for concrete structures and describes general material properties and manufacturing meth.

Field Philosophy and Other Experiments Brett Buchanan,Matthew Chrulew,Michelle Bastian,2021-05-13 This agenda-setting collection argues for the importance of fieldwork for philosophy and provides reflections on methods for such 'field philosophy' from the interdisciplinary vantage point of the environmental humanities. Field philosophy has emerged from multiple sources - including approaches focused on public and participatory research - and others focused on ethology, multispecies studies, and the environmental humanities more broadly. These approaches have yet to enter the mainstream of

the discipline, however, and 'field philosophy' remains an open and uncharted terrain for philosophical pursuits. This book brings together leading and emerging philosophers who have engaged in critical and constructive forms of fieldwork, for some over decades, and who, through these articles, demonstrate new possibilities and new experiments for philosophical practices. This collection will be of interest to scholars working across the disciplines of continental philosophy, environmental humanities, science and technology studies, animal studies, cultural anthropology, art, and more. The chapters in this book were originally published as a special issue of Parallax.

Practical Heat Treating Jon L. Dossett, Howard E. Boyer, 2006-01-01 What is heat treatment? This book describes heat treating technology in clear, concise, and nontheoretical language. It is an excellent introduction and guide for design and manufacturing engineers, technicians, students, and others who need to understand why heat treatment is specified and how different processes are used to obtain desired properties. The new Second Edition has been extensively updated and revised by Jon. L. Dossett, who has more than forty years of experience in heat treating operations and management. The update adds important information about new processes and process control techniques that have been developed or refined in recent years. Helpful appendices have been added on decarburization of steels, boost/diffusion cycles for carburizing, and process verification.

The Elgar Companion to the Chicago School of Economics Ross B. Emmett, 2010-01-01 Many know the Chicago School of Economics and its association with Milton Friedman, George Stigler, Ronald Coase and Gary Becker. But few know the School's history and the full scope of its scholarship. In this Companion, leading scholars examine its history and key figures, as well as provide surveys of the School's contributions to central aspects of economics, including: price theory, monetary theory, labor and economic history. The volume examines the School's traditions of applied welfare theory and law and economics while providing a glimpse into emerging research on Chicago's role in the development of neoliberalism. A companion in the true sense of the word, this volume surveys a wide body of Chicago economic studies and guides readers carefully through each. The Companion offers biographies of leading Chicago economists and evaluations of the School's connection to approaches to economics that draw from and complement the School, including the Virginia School and the work of Armen Alchian and Edward Lazear. Moreover, this book is a first in many respects as it analyzes the interconnections of the Chicago School's theory, methodology, and policy, and considers by what means and ideas the School's policy framework is driven. The breadth and depth of the insights presented here will appeal especially to students and scholars of economics and historians interested in economics, social science and applied public policy.

Soldiers of the Pátria Frank D. McCann, 2004 This book provides an authoritative history of the Brazilian army from the army's overthrow of the monarchy in 1889 to its support of the coup that established Brazil's first civilian dictatorship in 1937. The period between these two events laid the political foundations of modern Brazil—a period in which the army served as the core institution of an expanding and modernizing Brazilian state. The book is based on detailed research in Brazilian, British, American, and French archives, and on numerous interviews with surviving military and civilian leaders. It also makes extensive use of hitherto unused internal army documents, as well as of private correspondence and diaries. It is thus able to shed new light on the army's personnel and ethos, on its ties with civilian elites, on the consequences of military professionalization, and on how the army reinvented itself after the collapse of its command structure in the crisis of 1930—a reinvention that allowed the army to become the backbone of the post-1937 dictatorship of Getulio Vargas.
